

## QlikView Publisher

QlikView Publisher is an administration and management tool that provides a single access and control point for the company's QlikView analytical applications. Administrators can schedule, distribute, and manage security and access for QlikView applications across the enterprise. With QlikView Publisher, companies can balance the business need for widespread distribution of analytical functionality with the requirement to maintain centralized control and synchronization of sensitive corporate data.

### The right information to the right users at the right time

Analysis has become a critical success factor for any organization. As the use of business analysis spreads throughout the organization, controlling the distribution of analysis becomes increasingly important. With QlikView Publisher, you are in full control of the distribution of your company's QlikView applications. QlikView Publisher automates the data refresh process for QlikView application data. In addition, it ensures that applications are distributed to the correct users when they need them. With QlikView Publisher, you can be sure that the right information reaches the right user at the right time.

### Data security control

QlikView Publisher ensures users only have access to documents with their data. Based on the security criteria set by an administrator, QlikView Publisher will slice a QlikView application into multiple documents and then distribute the finalized document to all authorized users. This ensures that users only have access to the data that is truly theirs.

### Single point of access

Users have access to QlikView applications through the QlikView AccessPoint web portal. From here the updated applications are made available for online analysis via QlikView Analyzer. The QlikView AccessPoint supports the display and organization of QlikView applications by an administrator set list of meta-data. Using the QlikView AccessPoint, organizations create a secure location where users have access to a personalized list of business analysis applications.

## Scaling Simplicity

Manage scheduling, distribution, security, and access to all your QlikView applications through a single central web based portal.

### Benefits

- Centralised, effective and secure administration of QlikView applications and associated data
- Publish sub-sets of QlikView applications to a QlikView Server or to end-users based on their individual needs and access rights
- Full control of the time and frequency for the data reload and distribution of each application

### AccessPoint web portal

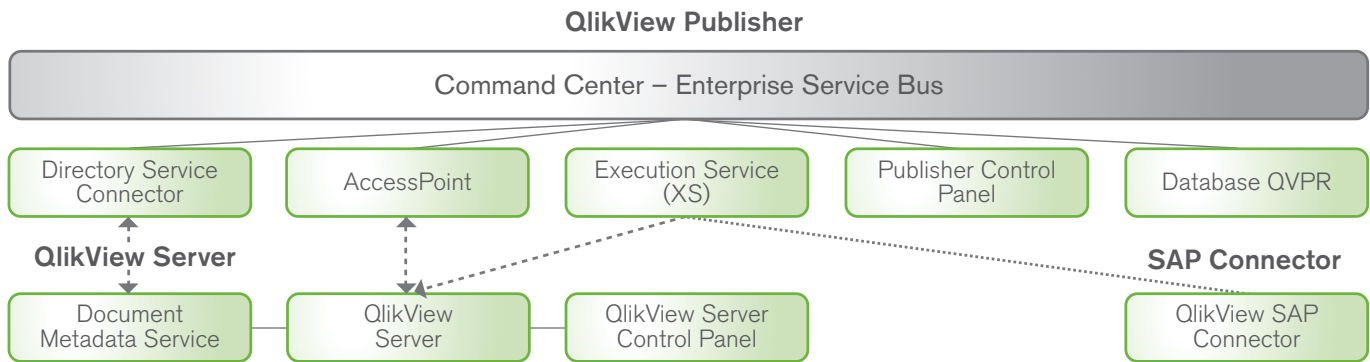

Via Internet Explorer plugin, Java, or the AJAX zero-footprint client. Or to download for offline analysis using QlikView.

**Secure access to business analysis**  
 QlikView Publisher integrates directly with an organizations existing security model to control user access rights making administration and distribution of business analysis both secure and efficient. With QlikView Publisher, it is easy to create routines which guarantee

the quality, timeliness, and accuracy of your company’s decision support.

**Built to meet today’s scalability and manageability challenges**  
 QlikView Publisher is built using Web Service technology to enable scalability and resilience; services can be grouped

to provide load-sharing and resilience. SNMP is provided to allow integration with Enterprise Monitoring tools. QlikView Publisher Jobs can, if needed, be triggered by external Enterprise Scheduling tools.

### Technical Specification

| QlikView          | 32-bit (x86)  | 64-bit (x64)  |
|-------------------|---|---|
| <b>Platform</b>   | Windows XP Professional <sup>1</sup><br>Windows Vista <sup>1</sup><br>Windows Server 2003 or 2008 | Windows XP Professional x64 Edition <sup>1</sup><br>Windows Vista x64 <sup>3</sup><br>Windows Server 2003 or 2008 x64 |
| <b>Processor</b>  | Pentium 4 compatible or higher recommended  | x64 compatible processors   |
| <b>Memory</b>     | Depending on size of applications; 512 MB or more recommended                                     | Depending on size of applications; 2 GB or higher recommended   |
| <b>Disk space</b> | 250 MB total required to install  | 250 MB total required to install  |
